

- Improved drainage performance with triple main groove design. Zigzag pattern of side grooves adds extra contact area on snow, condition for better grip force.
- Shallow grooves at tire shoulder prevent uneven wear and enhance handling performance.
- Central sipe design can balance comfort and grip force.
- Saw-tooth sipe on the tire shoulder improves ice and snow performance.
- Longitudinal sipe with sub straight grooves on the tire shoulder enhance handling when cornering.
- Special silica compound to enhance performance on icy and snowy roads.
