

- **Straight Wide Grooves:** 4 straight wide grooves enhance tire drainage efficiency and maneuverability on wet road condition.
- **Sub-Straight Grooves:** The two sub straight grooves on tire shoulders assist the main grooves drainage efficiency and reduce uneven tread wear.
- **Tiny Lateral Kerfs:** The kerfs can reduce pattern noise caused by tire rolling.
- **Sipes:** Sipes on tire shoulder reduce tire block rigidity, lower the noise from road, and increase comfort ability. NANKANG design team creates NS-20 with 5 pitches computer simulation technology to decrease noise at high speed.
