

- Circumferential V-shaped four-groove design enhances drainage efficiency on wet road.
- The enlarged contact area at the void ratio at 32% shortens braking distance on dry/wet road and enhance icy grip.
- Three dimensional solid sipe enhances pattern block stiffness, shortens braking distance on dry/wet road and upgrades maneuverability & cornering ability on icy road.
- Solid groove wall design prevents irregular wear and improves snow maneuverability.
- Unique compound enhances tread stiffness and surface friction to shorten braking distance.
