

- Multi-pitch arrangement overcomes noise effectively. Four circumferential-groove design raises drainage efficiency and stability on wet road.
- On tread shoulders large blocks which usually are found in summer patterns increase shoulder strength, escalate cornering handling stability and even treadwearing.
- The central blocks with 3D kerf enhance maneuverability on snowy road.
- Lots of irregular sipes in one block advance the braking capability on icy road.
- No matter in summer or in winter, N-607 users can drive with the best maneuverability and safety.
