

- Center rib and directional pattern designed enhances straight driving performance and maneuverability on snowy ground.
- Serrate multi-sipes designed can shorten braking distance on snowy and icy ground to reinforce braking performance and driving safety.
- 33% void ratio increases contact patch to enhance friction, shorten braking distance on dry/wet ground and enhance icy grip.
- Three dimensional sipes designed on tire shoulder enhances block stiffness, maneuverability and cornering performance on icy ground.
- Zigzag lateral grooves enhances ice-pollar effect and reinforces grip on snowy ground.
- Unique compound enhances tread rigidity and grip performance, it can shorten braking distance on wet ground and increase traction on snowy ground.
- Unique silica compound formula used for all sizes enhances wet grip.
